Shooting tips

Daylight photos work best · Include at least one wide-angle shot · Close-ups help AI detect materials and textures · The clearer the photo, the better the recommendations.

What are you looking for?

Items · Style · Color · Budget — all in one screen

Team notes — inputs under consideration (not in wireframe yet)

Placement zone — e.g. "corner by sofa", "beside the bed". Tells compositing AI WHERE to place items. High impact for image accuracy. Consider: free text or room map tap?

Material preference — wood / metal / rattan / fabric / mixed. Used as hard filter in product search + helps compositing AI match textures. Could be multi-select chips.

Size constraint — max width/height input. Critical for items like side tables. Could pre-fill from AI room analysis. Prevents recommending items that won't fit physically.

Budget split — if buying 2+ items, distribute evenly or prioritize one? e.g. "spend more on the lamp". Affects how search ranks products across categories.

New vs secondhand — toggle. Routes to different scraping pipelines (IKEA/Wayfair vs Marketplace/eBay). Low friction, high backend impact.

Rental-friendly — toggle (no drilling, lightweight).

~~Filters out wall-mounted or heavy items. Good for the rental apartment segment.~~

Lighting mood — bright & airy / warm & cozy / moody. Used by compositing AI to match lighting tone in generated image. Not critical for MVP but good for v2.

What are you looking for?

Fill in the details · Submit when ready

Step 2 of 4

A What do you want to add?

Describe it in your own words — multiple items are fine

"I want a side table next to my sofa for drinks and my phone, and maybe a floor lamp in the corner"
